WEBSITE QUALITY ASSURANCE (QA) AUDIT REPORT

Project: Cynbit Technologies Website Quality Audit

Website: https://www.cynbit.in/

Assessment: QA Testing Intern – Technical Assessment

Report Type: Preliminary QA Audit Report

Prepared by: Garima Rawat

Date of Testing: 1/11/ 2026

Device: Samsung Galaxy A52

Browser: Google Chrome, version- 155.0.8059.84

Operating System: Android 14

1. Introduction

The purpose of this quality assurance audit is to review the Cynbit Technologies website and identify possible issues related to navigation, functionality, usability and user experience.

The audit focuses on observing how website elements respond to user actions and documenting any issues noticed during testing. The findings in this report are based on the testing observations recorded by the candidate.

2. Objectives of the Audit

- To review the website's navigation and important links.

- To identify elements that do not respond as expected.

- To observe the general usability of the website.

- To identify possible issues affecting the user experience.

- To prepare a structured bug report.

- To recommend improvements for website quality.

3. Scope of Testing

The following areas are included in the planned audit:

Testing Area	Description
Navigation Testing	Checking menu items and internal page links
Functional Testing	Checking whether clickable elements respond
Usability Testing	Reviewing ease of navigation and user experience
Responsiveness Testing	Checking layout on different screen sizes

Content Review	Checking visible text, headings and page information
Compatibility Testing	Planning checks across browsers and devices

4. Testing Methodology

The audit follows a basic manual testing approach.

1. Open the website in a browser.

2. Review the homepage and visible navigation menu.

3. Tap the Careers navigation item.

4. Observe whether the expected page or response appears.

5. Return to the website and tap the Case Studies navigation item.

6. Observe whether the expected page or response appears.

7. Record the observed result.

8. Classify the issue and suggest a possible improvement.

9. Retest the issue after any correction.

5. Test Environment

Parameter	Details
Website	https://www.cynbit.in/
Device Type	Android mobile phone
Device Model	Samsung Galaxy A52
Operating System	Android 14
Browser Version	155.0.8059.84
Screen Resolution	1080x2400 pixels

Network	4G Lite
Browser	Google Chrome
Testing Type	Manual Testing
Testing Status	Preliminary

6. Preliminary Test Observations

Observation 1: Careers Navigation

Test ID: TC-001

- Observed Behaviour: When the Careers navigation item was tapped, no visible response was observed by the tester.
- Expected Behaviour: The Careers link should open the Careers page or provide a clear response.
- Actual Behaviour: No visible response was observed after tapping the link.
- Status: Preliminary issue – requires reproduction and verification.

Observation 2: Case Studies Navigation

Test ID: TC-002

- Observed Behaviour: When the Case Studies navigation item was tapped, no visible response was observed by the tester.
- Expected Behaviour: The Case Studies link should open the relevant page or provide a clear response.
- Actual Behaviour: No visible response was observed after tapping the link.
- Status: Preliminary issue – requires reproduction and verification.

7. Bug Summary

Two potential navigation issues have been reported during the initial mobile check.

Bug ID	Issue	Severity (Provisional)	Status

BUG-001	Careers navigation does not show a visible response after tapping	Medium	Verified
BUG-002	Case Studies navigation does not show a visible response after tapping	Medium	Verified

8. Recommendations

1. **High-Priority Recommendations**

- Verify the Careers and Case Studies navigation links on mobile.
- Confirm that each navigation item opens the correct destination.
- Check whether the links have valid destinations.
- Retest the navigation after any correction.

2. **Medium-Priority Recommendations**

- Review the mobile navigation menu behaviour.
- Check that clickable items provide clear feedback.
- Test the website on different screen sizes.
- Check the website on more than one browser.

3. **General Recommendations**

- Perform regular manual testing after website updates.
- Maintain a bug tracking register.
- Capture screenshots for reproducible issues.
- Retest fixed issues before closing them.
- Conduct periodic usability and responsiveness checks.

9. Test Coverage Matrix

Test Category	Planned Test	Current Test
Homepage	Open and review homepage	Not fully documented
Careers Navigation	Tap Careers menu item	Preliminary issue reported
Case Study Navigation	Tap Case Studies menu item	Preliminary issue reported

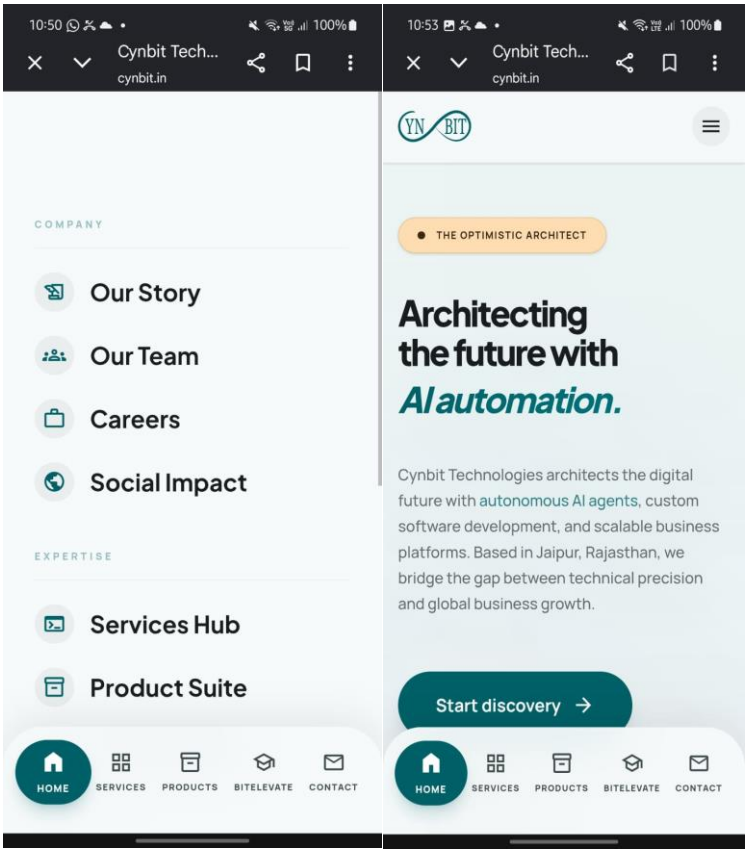

Other Navigation Links	Check remaining menu items	Not Run
Forms	Check form submission and validation	Not Run
Images	Check image loading	Not Run
Responsiveness	Check multiple screen sizes	Not Run
Browser Compatibility	Check multiple browsers	Not Run
Content	Review spelling and visible content	Not Run

10. Conclusion

The preliminary audit recorded two user-reported navigation concerns involving the Careers and Case Studies menu items on an Android mobile device. Both observations require further reproduction and verification before they can be treated as confirmed defects.

Additional functional, usability, responsiveness and browser compatibility testing is still required. The findings and recommendations in this report are intended to support further testing and improve the overall quality of the website.

11. Evidence and Screenshots

12. Final Note

This document is a preliminary audit report based on the observations recorded during the initial testing session. Tests that have not been executed are marked as Not Run. Further testing and verification are necessary before final sign-off.
